

domain names, ICANN, and Internet governance

Dave Clark, Senior Researcher, MIT LCS

"Well, it started out with twelve people in a room."

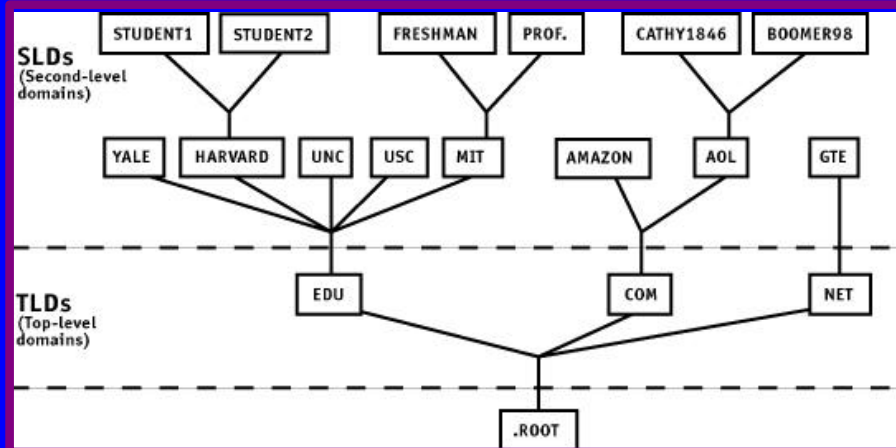

"So we decided we needed to split off a smaller advisory group and then a larger ... [one], and the advisory group has changed its name four times. It's a deliberate strategy. If you want to hire a committee such that people don't find you and ask if they can join, the one thing you can do is rename it every two years so they can't find you. So we used to call it the Internet Configuration Control Board. We made that term up to make it sound as uninteresting and boring as possible so we could go meet in private without anybody noticing us. Then we called it the Internet Advisory Board, and then we had to change that because the government passed the Sunshine Law."

Solution

- Jon thinks hard, adds the names
- Jon thinks hard, does an RFC, adds the names
- Jon convenes a committee

The IAHC

The DNS is an international resource and the IAHC will at all times operate with that perspective. The IAHC specification effort will address legal, administrative, technical and operational concerns, with particular attention to the questions of fairness and functional stability. The IAHC will attempt to define procedures which are as simple, fair and direct as possible, resolving the minimum required issues. In order to provide timely results, the IAHC will focus initially on the issues of highest priority.

GOALS AND MILESTONES

- Nov 11, 96 Publish IAHC charter & press release
Solicit near-term iTLD policy & procedure proposals
- Dec 19, 96 IAHC selected proposal available for public review
- Jan 1, 97 Last day to submit reviews of proposal
- Jan 15, 97 Near-term iTLD Policies & Procedures published
Implementation group formed for reviews and awards
- Feb 10, 97 Deadline for applications according to new policies and procedures
- Mar 1, 97 Initial awards according to new policies and procedures

UNITED STATES DEPARTMENT OF COMMERCE

Management of Internet Names and Addresses

Docket Number: 980212036-8146-02

AGENCY: National Telecommunications and Information Administration

ACTION: Statement of Policy

SUMMARY: On July 1, 1997, as part of the Clinton Administration's *Framework for Global Electronic Commerce*,⁽¹⁾ the President directed the Secretary of Commerce to privatize the domain name system (DNS) in a manner that increases competition and facilitates international participation in its management.

Accordingly, on July 2, 1997, the Department of Commerce issued a Request for Comments (RFC) on DNS administration. The RFC solicited public input on issues relating to the overall framework of the DNS administration, the

IFWP v. IANA

What is the International Forum for the White Paper?

The IFWP is an ad hoc coalition of professional, trade and educational associations representing a diversity of Internet stakeholder groups, including ISPs, content developers, trademark holders, networkers, intergovernmental groups, policy experts, end-users and others. This coalition has come together to sponsor a framework of coordinated international meetings, to be held around the world, at which stakeholders will discuss the transition to private sector management of the technical administration of Internet names and numbers as outlined in the policy "White Paper" recently released by the United States Government. These international meetings are open to all Internet stakeholders, who are encouraged to support this on-going process.

The screenshot shows the ICANN website homepage. The browser window title is "ICANN | Home Page - Microsoft Internet Explorer". The address bar shows "http://www.icann.org". The page features the ICANN logo (a globe with latitude and longitude lines) and the text "The Internet Corporation for Assigned Names and Numbers". Below the logo, there are navigation links: "About ICANN", "Supporting Organizations", "Committees, Task Forces, Etc.", "Organizational Chart", and "Site Search". The main content area is divided into two columns. The left column, titled "ICANN Resources", contains a list of links: "Announcements", "At Large, Top Level Committees", "Calendar of Events", "Contact ICANN", "Country Code Top-Level Domains Resource Network", "Contact us online", "Current Issues, Reports, Briefings, ICRS", "Feedback and Reform at ICANN", "Community-Asked Questions (FAQ)", "Links", "Meetings", "New Top-Level Domains (NTLD)", "Notes and Minutes", "org Reorganization", "Participate in ICANN", "Public Comment Cards", "Statistical Information", and "Staff Opportunities". The right column, titled "New and Noteworthy:", contains several news items: "NEW: Preliminary Report of ICANN's Board Meeting in Bucharest (05 June 2002)", "NEW: IDN Committee Final Report (27 June 2002)", "NEW: Annual Independent Neutrality Audit of VGRS (05 June 2002)", "Eleven .org Applications Posted (01 June 2002)", and "ICANN Committee posts two discussion documents (comments invited):" followed by two bullet points: "Registry Selection Considerations for Non-ASCII TLDs (14 June 2002)" and "Non-ASCII Top-Level Domain Policy Issues (Revised) (14 June 2002)".

questions

- what's really at stake here?
 - is what ICANN's charged with doing really "governance"?
 - do we need "internet governance" for anything?
- if ICANN governs us, how to govern ICANN?
 - if you think the whole thing is inherently and irrevocably ill-conceived, what alternatives do you suggest?

bottom-up consensus. It was also expected that such an entity could be established, and become functional, faster than a multinational governmental body.

It is now more than three years since the creation of ICANN, and there are some real accomplishments: the introduction of a competitive registrar market, the Uniform Dispute Resolution Policy, the creation of seven new global Top Level Domains. But despite this progress, all the original expectations of ICANN have not been realized. **ICANN is still not fully organized, and it is certainly not yet capable of shouldering the entire responsibility of global DNS management and coordination.** ICANN has also not shown that it can be effective, nimble, and quick to react to problems. ICANN is overburdened with process, and at the same time underfunded and understaffed. For these and other more fundamental reasons, **ICANN in its current form has not become the effective steward of the global Internet's naming and address allocation systems as conceived by its founders.** Perhaps even more importantly, **the passage of time has not increased the confidence that it can meet its original expectations and hopes.**

I have come to the conclusion that the original concept of a purely private sector body, based on consensus and consent, has been shown to be impractical. The fact that many of those critical to global coordination are still not willing to participate fully and effectively in the ICANN process is strong evidence of this fact. But I also am convinced that, for a resource as changeable and dynamic as the Internet, a traditional governmental approach as an alternative to ICANN remains a bad idea. The Internet needs effective, lightweight, and sensible global coordination in a few limited areas, allowing ample room for the innovation and change that makes this unique resource so useful and valuable.

ICANN Needs Significant Structural Reform

I have concluded that ICANN needs reform: deep, meaningful, structural reform, based on a clearheaded understanding of the successes and failures of the last three years. If ICANN is to

ICANN leaves ordinary surfers high and dry

Reuters News Agency

Backlash — The group that oversees the Internet's name system voted on Friday to **exclude ordinary Web surfers from its board in a move which critics say allows businesses interests to tighten their grip on the online world.**

ICANN, or the Internet Corporation for Assigned Names and Numbers, unanimously passed the resolution at its quarterly meeting, clearing one of the most controversial issues in the development of the four-year-old organization.

Under a radical new system, the on-line election of individual Internet users to the group's executive board has been shelved.

Instead, the 19-member board of directors will be drawn from representatives of technical, business, government and non-profit organizations. It will have ultimate say over future policy matters that govern the fundamental domain name system for the Internet.

ICANN, a non-profit group, oversees the process of doling out domain names with suffixes such as .com to businesses and individuals.

De chief executive officer, Stuart Lynn, said the vote was an important step for the global body as it would
